4. Change size of name column to 60 in client_master table.

Query:

```
alter table client_master
alter column name varchar(60);
```

The screenshot shows a database interface with two tabs: 'Messages' and 'Client Statistics'. The 'Messages' tab is active and displays the message 'Commands completed successfully.' Below the message, the completion time is shown as 'Completion time: 2026-01-04T22:05:59.7406280+05:30'.

5. Remove pincode column from table.

Query:

```
alter table client_master
drop column pincode;
```

The screenshot shows a database interface with two tabs: 'Messages' and 'Client Statistics'. The 'Messages' tab is active and displays the message 'Commands completed successfully.' Below the message, the completion time is shown as 'Completion time: 2026-01-04T22:05:59.7406280+05:30'.

1. Recursive Relationship.

A recursive relationship occurs when a table is related to itself through a foreign key.

Example: employee(empid, managerid) where managerid references empid.

2. Composite key.

A composite key is a primary key formed using two or more columns to uniquely identify a record.

Example: primary key (orderno, productno).

3. The 'like' operator with pattern matching.

The LIKE operator is used to search data based on a specified pattern in a column.

Example: `select * from client_master where city like 'M%';`

4. Drop Table command.

The DROP TABLE command permanently removes a table and all its data from the database.

Example: `drop table client_master;`

5. Full Outer Join.

A FULL OUTER JOIN returns all records from both tables, matching rows where possible.

Example:

```
select * from client_master c
full outer join sales_order o
on c.clientno = o.clientno;
```

Joins:

- Find out the products, which have been sold to 'Ivan Bayross'.

```
select distinct p.productno, p.description
from client_master c
join sales_order o on c.clientno = o.clientno
join sales_order_details d on o.orderno = d.orderno
join product_master p on d.productno = p.productno
where c.name = 'Ivan Bayross';
```

Results		
	productno	description
1	P00001	Pull Overs
2	P00002	Trousers

- Finding out the products and their quantities that will have to be delivered in the current month.

```
select p.description, d.qtyordered
from sales_order o
join sales_order_details d on o.orderno = d.orderno
join product_master p on d.productno = p.productno
where month(o.delydate) = month(getdate())
and year(o.delydate) = year(getdate());
```

Results		
	productno	description
1	P00001	Pull Overs
2	P00002	Trousers

- Listing the ProductNo and description of constantly sold (i.e. rapidly moving) products.

```
select productno, description
from product_master
where qtyonhand < reorderlevel;
```

Results		
	productno	description
1	P00001	Pull Overs
2	P00002	Trousers

4. Finding the names of clients who have purchased 'Trousers'.

```
select distinct c.name
from client_master c
join sales_order o on c.clientno = o.clientno
join sales_order_details d on o.orderno = d.orderno
join product_master p on d.productno = p.productno
where p.description = 'Trousers';
```

Results		Messages	Client Statistics
	name		
1	Ivan Bayross		
2	Virat Kohli		

5. Listing the products and orders from customers who have ordered less than 5 units of 'Pull Overs'.

```
select o.orderno, p.description, d.qtyordered
from sales_order o
join sales_order_details d on o.orderno = d.orderno
join product_master p on d.productno = p.productno
where p.description = 'Pull Overs'
and d.qtyordered < 5;
```

Results				Messages	Client Statistics
	orderno	description	qtyordered		
1	O19001	Pull Overs	4		

Subqueries:

1. Finding the non-moving products i.e. products not being sold.

```
select *
from product_master
where productno not in
(select productno from sales_order_details);
```

	ProductNo	Description	Profitpercentage	UnitMeasure	QtyOnHand	ReorderLevel	SellPrice	CostPrice
1	P00004	1.44 drive	15.00	Piece	80	10	1150.50	900.00
2	P00005	Shirts	20.00	Piece	200	40	1800.00	1300.00

2. Finding the name and complete address for the customer who has placed Order number 'O19001'.

```
select name, address1, city, state
from client_master
where clientno =
(select clientno from sales_order where orderno = '019001');
```

	name	address1	city	state
1	Ivan Bayross	Andheri East	Mumbai	Maharashtra

3. Finding the clients who have placed orders before the month of May'02.

```
select * from client_master
where clientno in
(select clientno from sales_order where orderdate < '2002-05-01');
```

	ClientNo	Name	Address1	Address2	City	State	BalanceDue	phone_no
